Sabayon Linux is quite a new addition to the family of KDE distributions. It first came into existence on the Gentoo Forums as RR4/RR64 and was designed to provide a fast and easy way to get a Gentoo system with extras. After the initial success, founder and developer Fabio Erculani decided to turn this project into a fully fledged distribution. It was also decided that a new name was needed and thus SabayonLinux was born. Fabio Erculani talks about the past, current status and the future of SabayonLinux.
