- [Multilib updates and more still to come](#) [2]

- [KDE 5\\_16.02 for Slackware-current](#) [3]

I have uploaded a new `?ktown?` package set. KDE 5\_16.02 contains the latest KDE releases: Frameworks 5.19.0, Plasma 5.5.4 and Applications 15.12.2. I had been sitting on this for a few days, and was waiting for Pat to release his own new batch of updates for slackware-current. With a fresh kernel and glibc in `-current` and new Plasma5 packages, it is almost time to create new ISO images for the Slackware Live Edition. More about `liveslak` in the next post.

- [Beta 6 for my Live ISO images](#) [4]

Yesterday I uploaded new ISO images for Slackware Live Edition, release `?0.6.0?`. Then I waited a bit before writing this article to allow the mirrors to catch up with the 8 GB of new files.

Check out my previous articles about Slackware Live Edition for more background information and read the `README.txt` file provided with the `?liveslak?` sources to get a grasp on a more technical level of how this all works.
