Bruce Byfield may have hit upon something in his latest rumination on the "imaginary new user." This "new user" has been used as an excuse to over-simplify Linux to the "detriment to other type of users." In Linux news, Bodhi chieftain Jeff Hoogland posted Moksha themes for last minute testing hinting that 4.0 must be very close. Douglas DeMaio posted a brief on the latest Tumbleweed snapshots and night falls on Linux.

- **openSUSE News: Tumbleweed Gets Two New Kernels** [4]

  In less than a week, openSUSE Tumbleweed had two snapshots that included new Linux Kernels.

  Snapshot 20160120 brought users Linux Kernel 4.8.3 and and four days later snapshot 20160124 brought the 4.8.4 Linux Kernel. A kernel patch for the Dirty Cow security vulnerability (CVE-2016-5195) came quickly to the rolling release and was available by
Saturday.
