Jeff Hoogland today posted that time has come to polish up Swami and asked for his bravest users to install the newest to give it a go. Tails is the latest distribution to deprecate their 32-bit architecture and GIMP 2.8.20 was released. Liam Tung reported on a new self-assembled laptop able to run Linux and Rick Broida suggested some light-weight distros for such cases. Just in case you actually take that route, Jamie McKane shared some tips for first time computer assemblers.
